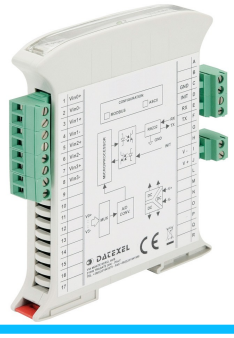
Remote I/O module 4 channel RTD Input on RS-485 network

DAT 3014



FEATURES

- **Field-Bus remote data acquisition**
- **Modbus Slave device on RS-485**
- **Modbus RTU/ Modbus ASCII protocol**
- **4 channels input**
- **Input configurable for RTD, Resistance and Potentiometer**
- **Watch-Dog Alarm**
- **Remotely Configurable**
- **2000 Vac 3-ways Galvanic Isolation**
- **High Accuracy**
- **UL / CE mark**
- **DIN rail mounting in compliance with EN-50022**

GENERAL DESCRIPTION

The DAT 3014 device is able to acquire up to 4 analogue input signals. The data are transmitted with MODBUS RTU/MODBUS ASCII protocol on the RS-485 network (RS-232 interface is available).
It is possible to connect on input RTD, Potentiometer or Resistance sensor.
The device guarantees high accuracy and stable measure versus time and temperature.
To ensure the plant safety, two Watch-Dog timer alarms are provided.
The isolation between the parts of circuit removes eventual ground-loop effects, allowing the use of the device even in the heavy environmental conditions.
The DAT 3014 is in compliance with the Directive 2004/108/EC on the electromagnetic compatibility.
The DAT 3014 is in compliance with the Directive UL 61010-1 for US market and with the Directive CSA C22.2 No 61010-1 for the Canadian market.
The device is housed in a rough self-extinguishing plastic container which, thanks to its thin profile of 17.5mm only, allows a high density mounting on EN-50022 standard DIN rail.

COMMUNICATION PROTOCOLS

The DAT3014 is designed to work with the MODBUS RTU/MODBUS ASCII protocol: standard protocol in field-bus; allows to directly interface DAT3000 series devices to the larger part of PLCs and SCADA applications available on the market.
For the protocol instructions, refer to the User Guide of the device.

USER INSTRUCTIONS

Before to install the device, please read the “Installation Instruction” section.
If the module configuration is unknown, with device powered off, connect the INIT terminal to the GND terminal (ground), at the next power on the device will be auto-configured in the default settings (refer to the User Guide of the device).
Connect power supply, serial bus and analogue inputs as shown in the “Wiring” section.
The “PWR” LED state depends on the working condition of the device: see the "Light Signalling" section to verify the device working state.
To perform configuration and calibration operations, read the instructions in the User Guide of the device.
To simplify handling or replacing of the device, it is possible to remove the wired terminals even with the device powered.

INSTALLATION INSTRUCTIONS

The DAT 3014 is suitable for fitting to DIN rails in the vertical position.
For optimum operation and long life follow these instructions:

When the devices are installed side by side it may be necessary to separate them by at least 5 mm in the following case:
- If panel temperature exceeds 45°C and at least one of the overload conditions exist.

Make sure that sufficient air flow is provided for the device avoiding to place raceways or other objects which could obstruct the ventilation slits. Moreover it is suggested to avoid that devices are mounted above appliances generating heat; their ideal place should be in the lower part of the panel.
Install the device in a place without vibrations.

Moreover it is suggested to avoid routing conductors near power signal cables (motors, induction ovens, inverters etc...) and to use shielded cable for connecting signals.

HOW TO ORDER

In the order phase, it is mandatory to specify the interface type (RS485 or RS232) .
DAT3014 can be supplied with the configuration specified by the customer.

ORDER CODE:

DAT 3014 / 485 / Pt100

- 485: Interface type — 485 : RS-485; 232 : RS-232
- Pt100: Input type
